

Have these reflections helped you individually or our group for the portfolio?

These are the reflections we wrote in class about the process and plans towards building our portfolio.

I put the webquest, quizzes, HWs, & square video notes, lab summary, QFTs, EDOs, and reflections into my portfolio as it Regens Ho with blocks today.

The only thing that hasn't been going well is the group portfolio because we haven't started the website we have been planning to do. The website was not created yet and no papers were collected to be part of the portfolio.

I would add my lab prep and chem quest packets to my portfolios. Also I would like to start on the group portion of the portfolios. I agree with -->. make portfolio very creative.

Add more suggestions to the things the group could add to the portfolio.

If the portfolios were to be collected tomorrow, I feel like I would be marked off for the lab prep and chem quest portion of the portfolio. For the group portfolio, we would be knocked off for not starting anything because we haven't started the website yet. In order to earn a higher mark, we would have to start on the website as soon as possible.

The portfolio would probably receive a failing grade as the group at that point had not even started the portfolio yet.

i think doing a website for our group portfolio is a great idea. i dont think anybody else is doing the same thing, so it will definitely be creative, versatile, and original at the same time.
